

Twister™ Methods

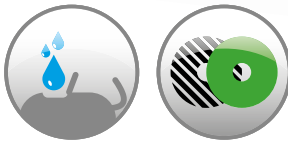

Daily cleaning - Standard

Twister™ pads work effectively in daily cleaning on all common floors. A Twister™ pad and water is all that is required to remove dirt and debris from the floor.

Note! Anywhere a conventional red pad and cleaning chemicals are used it can be replaced by a Twister™ Green and water.

Note! The Twister™ Green pad is also ideal for dry, high speed polishing of the floors and can be used up to 3500 rpm (UHS).

Step 1:

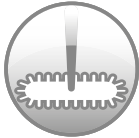

Check the machine and fill with clean water into the solution tank. Mount a Twister™ Green pad to the velcro holder with the color side down to the floor.

Note! The choice of Scrubber drier will affect the cleaning result. However, Twister™ can be used with all common machines but the recommendation consists of the following:

- Pressure: >20 kg
- Waterflow: 1 dl/m²
- Speed: 3-5 km/h

Step 2:

In order to obtain good cleaning results and to increase the lifespan of the Twister™ pad, dry mop the floor.

Step 3:

Clean the floor.

Note! Check that the water flow is ok and that the integrated vac picks up the dirty water.

Step 4:

When complete, remove the Twister™ pad from the machine and rinse the pad thoroughly. Change the Twister Pad when the coloured layer has disappeared.

Note! The lifespan of the Green Twister™ pad is approx 30.000 m².
