

HTC - the Innovators, not the imitators!

HTC Twister™ Marble floor guide

Material:

Metamorphic rock material that consists of calcite or dolomite crystals, being the result of metamorphism of limestone by heat and pressure.

Characteristics:

Pure marble is white but a wide range of colors exist caused by mineral impurities. Medium/high softness of stone. Recognised through its veins of different colours.

Availability:

Marble is common as a floor material in public areas, entrances, supermarkets and airports etc. Especially common in Southern Europe

TWISTER on Marble:

Ideal material to clean and maintain with TWISTER.

All TWISTER methods suitable, Standard, Intensive and Extreme + daily maintenance with green pad. Even and high gloss due to softness of stone and homogeneous surface. Very receptive to high speed polishing. Sometimes a higher concentration of TWISTER Cleaner will help to bring back the colour and a deeper shine on a old worn floor.

Description/how to recognize

Metamorphic rock
Veins of different colors

Attributes/softness

Medium softness

How to use TWISTER

Ideal for upgrade (intensive and standard) and daily maintenance. Dry buffing effective for higher gloss.

Expected result/tips and tricks

High cleanliness and shine due to homogeneous surface and relatively soft stone. Higher concentration of cleaner will help bring back the color and deeper shine to a worn floor.
