Renovation terrazzo & natural stone - Standard

Renovation with DSC Hybrid is equal to light wet-grinding and should be made if the floor is too worn down. The DCS Hybrids can be used on terrazzo & natural stone floors.

Note! This renovation process should be followed up by the "Intensive upgrade - terrazzo & natural stone" process. See instructions...

Step 1:

Remove loose dirt from the floor. Remove unsecured furniture and protect other surfaces from the dirty water. Carry out safety checks and mount the water tank. Fill the tank with clean water.

Step 2:

Attach the star-pad to the velcro holder, attach the chosen segments and mount on the selected cleaning machine.

Step 3:

Thoroughly pre-wet the area below the machine before starting. A total of 10 passes over the floor surface is recommended for optimal result.

Step 4:

Use a wet-vacuum to suction up the dirty water. Repeat steps 3 and 4 for the next area. Repeat the same procedure with every color (from the most abrasive grit chosen to the least abrasive grit, using all remaining grinding colors/levels).

Step 5:

Empty both water tanks on the single disc machine and the wet vacuum cleaner. Rinse and brush the grinding pads. Clean the machines and the cables with a moist cloth. Wind the cables loosely. Clean / wash the pad / segments.
